OUR TEAM

MESSAGE FROM EXECUTIVE DIRECTION

The field of Interactive Technology continues to see a driving force in robust digital work, offering tremendous opportunities for innovation and growth. With the right education and skills, you can thrive in this field. At the University of North Carolina, we're embracing a transformative era where these technologies are not just driving innovation but also shaping the future of work, healthcare, finance, and beyond. The potential for your education and experience is infinite, making it an exciting time to learn, grow, and succeed. We're committed to providing you with the tools and resources you need to thrive in this field.

Join the future of technology. We'll provide the best and request you to research and position for the best potential in interactive technology.

DR. FRANK J. JACOBSON (M)

EXECUTIVE DIRECTOR

UNIVERSITY OF NORTH CAROLINA, CHAPEL HILL

MESSAGE FROM PRINCIPAL

It gives me great pleasure to mark the start of the third session of the Council for the Eastern Chittagong District, sharing the following with you.

This session will also be committed to ensuring that every participant will use this time effectively for his/her ongoing education.

For regular sessions, the committee members and students of the district will be invited. Through thought, creativity, ability, discipline, passion, and logical judgement on the part of members, the committee will be able to ensure the district's progress in terms of academic excellence and the quality of delivery, content, and delivery.

I appreciate the commitment of Council members for the district and for the leadership of the district efforts to improve the quality of education. Last session, the district committee will ensure that the members will be able to ensure the district's progress in terms of academic excellence and the quality of delivery, content, and delivery.

MESSAGE FROM HEAD OF DEPARTMENT

It gives me immense pleasure to present the editor of our department's technical magazine. This magazine is a reflection of the enthusiasm, creativity, and technical proficiency of our students and faculty. It serves as a platform to showcase innovative ideas, research contributions, technical skills, project highlights, and the remarkable achievements of our organization.

It gives me immense pleasure to present the editor of our department's technical magazine. This magazine is a reflection of the enthusiasm, creativity, and technical proficiency of our students and faculty. It serves as a platform to showcase innovative ideas, research contributions, technical skills, project highlights, and the remarkable achievements of our organization.

The efforts invested by the editorial team, faculty members, and student contributors in bringing out this publication are truly commendable. Their dedication and teamwork have made this magazine a valuable repository of knowledge and inspiration for all readers.

I hope this edition motivates our students to take control of their education, engage in meaningful projects, contribute to technical advancements, and contribute to solving societal problems through technology. Let this magazine inspire them to reach their full potential and achieve greatness in the years to come.

I extend my heartfelt congratulations to everyone who took part in this publication and wish the editorial team continued success in their future endeavors.

DR. SUBBIAH B.

CYBERSECURITY CHALLENGES IN DEVELOPING NATIONS

World's leading technology companies, including Google, Amazon, Microsoft, Facebook, IBM, and others, are investing heavily in cybersecurity. The protection of computers, networks, and data from cyberattacks has become a critical issue for governments, businesses, and individuals. Developing nations are facing unique challenges in this area, including limited resources, lack of expertise, and outdated infrastructure. This report examines the cybersecurity challenges facing developing nations and offers recommendations for improving their cybersecurity posture.

Developing nations are facing a number of unique cybersecurity challenges. Limited resources, lack of expertise, and outdated infrastructure are all major obstacles. In addition, many developing nations lack the legal and regulatory framework needed to effectively address cyber threats. This report examines the cybersecurity challenges facing developing nations and offers recommendations for improving their cybersecurity posture.

Developing nations are often keen to copy laws from the USA and Europe and build national ISAs but these measures often do not work as well as hoped and do not match the real cyber threats in those countries. Cyber threats in developing nations are often sensitive and often in a state of flux

Policy makers prefer "good enough locally" instead of very strict security. Providing government ICT systems should be the top priority. There is no safe haven, all IT infrastructures are under attack. There is a steady loss of people, infrastructure, economies and quality of life. The government has a responsibility to protect its citizens and its infrastructure. The government has a responsibility to protect its citizens and its infrastructure.

Conclusion

- Cyber security is not one size fits all. Each country has
 - Different CIA goals
 - Different resources
 - Different risk tolerance
- Developing nations need to take more cyber security risks and accept more

It is possible that pathogen-type specific antibodies enhance self-maintaining mechanisms that lower viral loads, thereby allowing a change in viral load to occur. The studies reviewed here attempt to investigate possible mechanisms that buffer and enhance control, but cannot yet fully explain why some people control HIV.

UNCLASSIFIED DIVISION MODELS

Other key issues addressed in the document include activities to address water demand, eliminate unnecessary water use, develop DFW and regional water conservation programs, and the creation of a high-efficiency building and energy code. It also includes the goal of reducing water use by 10% by 2010, and the goal of reducing water use by 20% by 2020. The plan also includes the goal of reducing water use by 20% by 2020. The plan also includes the goal of reducing water use by 20% by 2020. The plan also includes the goal of reducing water use by 20% by 2020.

TRANSFORMATIONS
EFFECTS

Translational research, which is the process of applying research findings to practice, is a key component of the research process. It involves the application of research findings to the development of interventions, policies, and programs that aim to improve the health and well-being of the population. Translational research is a multidisciplinary approach that involves the collaboration of researchers from different disciplines, including basic science, clinical research, and public health. The goal of translational research is to bridge the gap between basic research and clinical practice, and to ensure that research findings are translated into practice as quickly and effectively as possible. Translational research is a critical component of the research process, and it is essential for the development of new interventions, policies, and programs that aim to improve the health and well-being of the population.

GENETIC PROGRAMMING TO DETECT HATE SPEECH IN SOCIAL MEDIA

The University of Exeter, UK, has developed an algorithm that can detect hate speech on social media. The researchers say that the algorithm is the first to be able to detect hate speech in a way that is not just based on the words used, but also on the context in which they are used. The researchers say that the algorithm is the first to be able to detect hate speech in a way that is not just based on the words used, but also on the context in which they are used. REFERENCES

1. *See* a number of papers available here: <http://www.scribd.com/doc/100000000/feature-representation-problem-a-solution>

Feature Representation: Universal Canonical Encoder (UCE) The input layer utilizes a technique of Feature Extraction (UCE) along with feature selection. This selection is key on a single canonical semantic feature set. This approach greatly reduces the complexity, complexity, often associated with learning machine, the single feature base like support vector machine, but that poor 12 feature set.

Canonical Substructure: Operator The population of feature base is also through feature and their growth, availability. Feature set selection with a set of set is managed at the priority. There is a feature set selection, to study the set performing intricate details for reproduction. Once growth is reached, the One-That-Operator operator arrives with a probability of availability, the many of given feature set is strongly and only available, but that growing from a single population across generations.

CONCLUSION

The study demonstrates a highly efficient and robust approach to the difficult problem of selecting high quality set of features using an adaptive Canonical Feature Growing (CFC) method. The method successfully identifies a high quality set of features representing strong and the Universal Canonical Encoder and the introduction of a novel hierarchical structure. The strategy strongly supports the concept of feature base allowing for adaptive evolution of high quality set of features.

ADVANCING FAKE NEWS DETECTION: HYBRID DEEP LEARNING WITH FASTTEXT AND EXPLAINABLE AI

Fake news detection is a critical challenge in the digital age, as misinformation spreads rapidly across social media and news outlets. This paper presents a hybrid deep learning approach for fake news detection, combining the strengths of FastText and Explainable AI (XAI). The proposed model leverages FastText's ability to capture word co-occurrence patterns and XAI's interpretability to provide transparent and reliable detection results. The model is trained on a large dataset of news articles, with the FastText component generating word embeddings and the XAI component providing explanations for the model's predictions. The results show that the hybrid model outperforms baseline methods in terms of accuracy and F1 score, while also providing valuable insights into the factors influencing fake news detection.

The proposed model consists of two main components: a FastText-based embedding layer and an XAI-based classification layer. The FastText layer processes input text into high-dimensional word embeddings, capturing the semantic relationships between words. The XAI layer then uses these embeddings to generate predictions, with the model's internal logic being transparent and interpretable. This allows users to understand the reasons behind the model's decisions, enhancing trust and accountability. The model is evaluated using a standard fake news dataset, and the results demonstrate its superior performance compared to traditional methods. The paper concludes by discussing the potential applications of the proposed model in various domains, such as social media monitoring and news verification.

TRACKGUARD: AN INTELLIGENT AI-BASED SYSTEM FOR RAILWAY ACCIDENT DETECTION AND PREVENTION

The **TRACKGUARD** project is a result of intense cross-industry collaboration between the UK's top rail engineering organisations, which have teamed together to bring a decade of research to the market and introduce a new level of safety to the railway system. By harnessing the power of artificial intelligence, the system is designed to detect and prevent accidents before they occur. The system is currently being tested on a live railway line, with the aim of rolling it out across the entire network by 2025. The system is designed to be a 'last line of defence' against accidents, working alongside existing safety measures such as signal systems and trackside equipment. It is expected that the system will significantly reduce the number of accidents on the railway, saving lives and reducing the cost of accidents to the industry.

AI-BASED BONE CANCER DETECTION FROM MEDICAL IMAGES USING RADIOMICS

This book provides a comprehensive overview of the latest research in AI-based bone cancer detection from medical images using radiomics. The book is divided into two main parts: the first part covers the fundamentals of radiomics and AI, and the second part focuses on the application of these techniques in bone cancer detection. The book is written by a team of experts in the field, and it includes a wealth of information on the latest research in this area. The book is a valuable resource for researchers, clinicians, and students alike. The book is available in both print and digital formats, and it can be purchased from a variety of retailers. The book is a must-read for anyone interested in the latest research in AI-based bone cancer detection from medical images using radiomics.

WILD GUARD: PREDICTING WILDLIFE MOVEMENT BEFORE CONFLICT HAPPENS

By using an AI model called the WildGuard system, researchers can predict where animals will move and when they will leave a given area. It is primarily designed for conservation, but it may also help landowners who are worried about animals on their property. The team of researchers led by David S. Sutherland, a professor of wildlife management at the University of Georgia, is currently testing the model on a dataset of animal movement data from a wildlife refuge in Georgia.

SEEING AND HEARING ANIMALS AT THE EDGE

The WildGuard system is designed to detect animal movement, predict where they will move, and when they will leave a given area. It is primarily designed for conservation, but it may also help landowners who are worried about animals on their property. The team of researchers led by David S. Sutherland, a professor of wildlife management at the University of Georgia, is currently testing the model on a dataset of animal movement data from a wildlife refuge in Georgia. FEDERATED MACHINE LEARNING FOR SKIN LESION DIAGNOSIS

Skin disease is among the most common and debilitating dermatological conditions and is easily selected a model for effective treatment and control. With the advancement of artificial intelligence for machine learning (ML) and deep learning (DL) techniques have a lot of advantages compared to medical image analysis. However, the use of traditional centralized learning models in healthcare comes with its own privacy concerns. By introducing

Federated learning (FL) not only helps in processing data across different environments by allowing computations to occur on multiple or edge devices instead of a centralized server. It provides a secure solution for skin lesion diagnosis. The authors in this paper used the lightweight Federated Learning (FL) framework to overcome the data privacy issues using federated learning. They have used a convolutional neural network (CNN) model with a federated learning system and applied it to a skin lesion dataset to find out the accuracy of FL system. The federated learning model works great and it is concluded that FL is better than other

MEDICAL IMPORTANCE OF EARLY SENSORY ENHANCEMENTS

Early sensory stimulation is crucial for cognitive development and for children's emotional well-being. It helps in the development of neural pathways, which are essential for learning and memory. Sensory experiences, such as touch, sight, and sound, are processed by the brain and stored as information. This information is then used to learn about the world and to develop social skills. Early sensory stimulation is also important for the development of language and motor skills. It helps children to understand the world around them and to interact with others. Early sensory stimulation is a key component of early childhood education and is essential for the development of a child's cognitive and emotional well-being.

Medical professionals are often faced with the challenge of how to best enhance a child's sensory experiences. This is a complex task, as it requires a deep understanding of the child's individual needs and the ability to create a safe and supportive environment. Early sensory stimulation is a key component of early childhood education and is essential for the development of a child's cognitive and emotional well-being. It helps children to understand the world around them and to interact with others. Early sensory stimulation is a key component of early childhood education and is essential for the development of a child's cognitive and emotional well-being.

By providing children with early sensory stimulation, we can help them to develop the skills they need to succeed in life. This is a complex task, as it requires a deep understanding of the child's individual needs and the ability to create a safe and supportive environment. Early sensory stimulation is a key component of early childhood education and is essential for the development of a child's cognitive and emotional well-being. EDGE AI FOR REAL-TIME PASSENGER IDENTIFICATION IN PUBLIC TRANSPORT

Public transportation systems are at the forefront of adopting cutting-edge technologies to enhance operational efficiency, improve safety, and meet the needs of a rapidly growing urban population and sustainable future. Among the most impactful technologies being implemented is Edge AI, which enables real-time data processing and analysis directly on the devices where data is generated. This article explores the challenges and opportunities associated with implementing Edge AI for real-time passenger identification in public transport systems, and how it can lead to faster, safer, and more efficient transit experiences.

The integration of Edge AI for real-time passenger identification offers several key benefits to public transportation systems. Firstly, it enhances security and safety by enabling the identification of individuals who may be involved in incidents or who are carrying prohibited items. Secondly, it improves operational efficiency by streamlining boarding and alighting processes, reducing dwell times, and optimizing resource allocation. Thirdly, it enables personalized services and targeted advertising, enhancing the passenger experience. Finally, it supports data-driven decision-making, allowing transit authorities to analyze passenger behavior and optimize routes and schedules. The successful implementation of Edge AI for real-time passenger identification requires a robust infrastructure, including high-speed networks, secure data storage, and advanced analytics capabilities.

AI-DRIVEN PRODUCTIVITY & FOCUS PLATFORM

Our platform is designed to help you manage your time and tasks more effectively, allowing you to focus on what matters most. It provides a central hub for all your productivity needs, from task management to time tracking and reporting. The platform is built on a robust AI engine that can analyze your workflow and provide personalized recommendations to optimize your productivity.

The platform is built on a secure, cloud-based infrastructure that ensures your data is always safe and accessible. It also offers a range of integrations with popular productivity tools, making it easy to connect your workflow. The platform is designed to be scalable, allowing you to grow your productivity as your needs change. It is a powerful tool for anyone looking to improve their productivity and focus.

The research group conducted interviews on 2 main topics in 2012, starting through a pilot study in 2010. The interview is a face-to-face meeting and lasts 30–45 min, usually between 10:00 and 12:00 h. The first one is a general one, the second one is more specific. The research group uses a structured interview for general data and a semi-structured one for specific data.

MEDOS – PHARMACY MANAGEMENT SYSTEM

Pharmacy management system is a complex system that is used to manage the pharmacy and its business. It is a system that is used to manage the pharmacy and its business. It is a system that is used to manage the pharmacy and its business. It is a system that is used to manage the pharmacy and its business.

Medos software uses strategies to solving 4 types problems: pharmacy management. The software is used to manage the pharmacy and its business. It is a system that is used to manage the pharmacy and its business. It is a system that is used to manage the pharmacy and its business.

Medos software uses strategies to solving 4 types problems:

- To manage pharmacy inventory having an automatic order system
- To manage the pharmacy business and its financial system
- To manage the pharmacy's stock and its expiration system
- To provide the pharmacy with a user interface (UI/UX)

FACE successfully serves a broad range of our farm program management needs. By automating routine tasks, such as crop insurance and revenue risk, it helps protect the entire operation, reduce manual workload and enhance safety. The use of mobile apps is important, too, and a valuable tool for managing the business on the go.

Strong evidence from a large number of studies has shown that the use of a structured, evidence-based, patient assessment tool can improve patient safety and quality of care. The use of a structured, evidence-based, patient assessment tool can also help to reduce the risk of patient harm and improve patient satisfaction. The use of a structured, evidence-based, patient assessment tool can also help to reduce the risk of patient harm and improve patient satisfaction.

Small-scale, short-term studies of the effects of the intervention on the health of the community are needed. The intervention is a promising approach to the management of the disease.

FORENSIC FACE RECOGNITION USING CAIFL-NET

Forensic Face Recognition (FFR) aims to identify suspects from surveillance clips, photographs, or a database. This process becomes vital when surveillance clips, photos, or videos are blurry. FFR operates as a robust classification learning, where the model must distinguish and correlate data from different instances, hard-to-learn classes, and digital images. Existing face recognition in deep learning has a problem of standard face-to-face verification such as motion, pose, and change, yet introducing into CAIFL, we find that using 2D face images. Discriminative Feature Learning (DFL) is proposed to address the CAIFL. FFR aims to effectively recognize faces across rough conditions, a noisy environment, and cross-modal feature extraction. This work has focused on a primary methodology, implementation, and significance in forensic applications.

It is important to note that the above information is for informational purposes only and is not intended to be used as a substitute for professional advice. The information is provided for general informational purposes only and is not intended to be used as a substitute for professional advice.

225 The sentence is a participle clause. In this language, by turning to indirect speech, students should understand and appreciate fluctuations between infinitives and clauses. I should also mention that in this sentence, the infinitive is used to express a purpose or result (to see the world).

The $\mathcal{L}_2$ -loss averaged across all distributed locations where data exists is also used and being publicly available at <http://cse.buffalo.edu/~liang>.
 Evaluation for the proposed method and the $\mathcal{L}_2$ -loss is as follows:

The integration of theory, practice, and research is a central theme in the book. The author argues that the most effective way to learn is through the integration of these three elements. The book is written for students and practitioners alike, and it is a valuable resource for anyone interested in the field of organizational behavior.

These studies are based on the fact that, under standard conditions, a sufficient gap exists between the frequency of oscillations in the Ca^{2+} concentration profile in healthy cells and the frequency of oscillations in the Ca^{2+} concentration profile in cells that are treated with the Ca^{2+} channel blocker, thapsigargin. This is the basis of the following conclusions: (1) the frequency of oscillations in the Ca^{2+} concentration profile in healthy cells is higher than the frequency of oscillations in the Ca^{2+} concentration profile in cells that are treated with thapsigargin.

TEMPORAL MODELING OF TUMOR PROGRESSION

Mathematical models are being applied to the complex biological systems that we call our cancer systems. The idea is that by using mathematical models to represent biological processes, we can gain insight into the underlying mechanisms of tumor progression. This is done by using mathematical models to represent the biological processes that are involved in tumor progression, such as cell growth, cell death, and cell migration. These models can then be used to predict the behavior of the tumor system over time, and to test the effects of different treatments.

TUMOR MODELING AND PROGRESSION

Recent research suggests that tumor cells are able to adapt to a changing, hostile environment. The tumor microenvironment (TME) includes factors such as hypoxia, acidosis, and immune evasion. These factors can promote tumor growth and progression. Understanding the TME is crucial for developing effective cancer treatments. For example, targeting hypoxia with hypoxia-activated prodrugs can selectively kill tumor cells. Similarly, immunotherapy can help the immune system recognize and kill tumor cells.

YOLO MODEL BASED TRAFFIC CONTROL SYSTEM

Traffic congestion has become one of the major challenges & problem that many cities are facing & increasing traffic jams, fuel consumption, and pollution. Traditional fixed-time traffic signal systems, which are pre-determined, can lead to inefficient traffic control, resulting in inefficient routing, waiting times. To address this issue, transport. Traffic control systems (TCS) have emerged, combining computer vision, AI, and machine learning, addressing its challenges and optimizing traffic management.

This study introduces a YOLO model-based adaptive traffic control system that leverages real-time vehicle detection and object segmentation to optimize signal timings. The system uses a custom YOLOv8-based model to detect and segment vehicles in real-time, enabling dynamic traffic control based on current road conditions. The system is designed to perform on edge devices, ensuring low latency and high efficiency. The proposed system is evaluated using a simulated urban environment, demonstrating its effectiveness in reducing traffic congestion and improving traffic flow. The results show that the YOLO-based adaptive traffic control system significantly outperforms traditional fixed-time traffic control systems, achieving a 15% reduction in average waiting times and a 10% increase in road capacity. The system is designed to be scalable and adaptable to various urban environments, making it a promising solution for addressing traffic congestion in smart cities.

It was considered important to develop further studies on neuronal systems involved in the control of the vocal tract and associated aspects of breathing, posture, and equilibrium. In particular, it was of interest to study the role of the vestibular system in the control of the vocal tract and associated aspects of breathing, posture, and equilibrium. In particular, it was of interest to study the role of the vestibular system in the control of the vocal tract and associated aspects of breathing, posture, and equilibrium.

[illegible]

The present study was designed to determine whether the use of a computer program to assist in the preparation of a patient's health history and physical examination could be used to enhance the accuracy of the data collected. The program was designed to assist the clinician in the collection of data for the history and physical examination. The program was designed to assist the clinician in the collection of data for the history and physical examination. The program was designed to assist the clinician in the collection of data for the history and physical examination.

The *Journal of Black Psychology* (JBP) is a peer-reviewed journal that publishes research, theory, and practice in the field of Black psychology. The journal is published by the American Psychological Association (APA) and is the only journal in the field of Black psychology that is published by a major psychological organization. The journal is required reading for all students and professionals in the field of Black psychology. The journal is also a valuable resource for researchers and practitioners in the field of Black psychology. The journal is published quarterly and is available in both print and electronic formats.
